DEPOT AND DOCKING INSTALLATION, HAIPHONG PORT

The depot and docking installation under study is located on the north bank of the Cua Cam (river) at coordinates 20 52 28N - 106 40 30E. The installation is annotated on the enclosed map (Figure 1), and is outlined on the enclosed annotated photograph (Figure 3). Table 1 contains a probable description and dimensions of the buildings at the installation. The annotated items listed in Table 1 and appearing in the text are keyed to the enclosed line drawing (Figure 2). All measurements have been made by the CIA/IAD/IB project analyst. They should be considered as approximate and must not be taken as official NPIC mensuration data compiled by the Technical Intelligence Division, NPIC.

25X1 The installation consists of two man-made islands which are surrounded by  
25X1 water only at high tide. The larger island (Annotation C) is connected to the  
25X1 mainland by a causeway approach (Annotation A) and a causeway (Annotation B).  
25X1 [redacted] the installation consisted of only the larger island and was served  
25X1 by a pier (Annotation D). [redacted] three buildings had been constructed  
25X1 on the smaller island (Annotation F) and the base of a new T-Head pier (Annotation  
25X1 26) had been completed. The T-Head of the new pier had taken form [redacted]  
25X1 [redacted] and appeared to be complete [redacted] and construction  
25X1 had begun on a causeway (Annotation E) connecting the two islands. This cause-25X1  
25X1 way was complete [redacted] and a new building was under construction  
25X1 (Annotation 25) on the smaller island. The major docking activity had been 25X1  
25X1 switched to the new T-Head pier [redacted] where it appeared that the old 25X1  
25X1 pier had been partially dismantled and allowed to deteriorate. 25X1

The facility, as it appeared [redacted] is a complete depot and dock-  
ing installation. The new building had been completed, and eight horizontal  
storage tanks (Annotation 27) had been installed on the smaller island. Security  
for the installation consists of a wall on the north, east, and west sides of  
the larger island; a probable guardhouse, trench, and three automatic weapons -  
type placements on the causeway approach (Annotation A); and an occupied AAA  
site approximately 2000' west of the installation.

Although the installation apparently serves as a depot and docking facility,  
and in general has the appearance of a military installation, there is no photo-  
graphic evidence that the installation services infiltration boats that transport  
arms from North Vietnam to South Vietnam. Cargo has never been observed arriving,  
being stored, or being loaded on boats. The general absence of boats at the  
facility during daylight indicates probable night-time boat loading activity.

25X1

The only boats observed at or near the installation, other than work barges during construction of the new T-Head pier, include a 45' Junk observed [redacted] a 80' Junk observed [redacted] and a Swatow gunboat observed [redacted]. Boats most commonly observed in the nearest anchorages were Coasters approximately [redacted].
